To Whom it May Concern:

For the past 10 years, my entire facility, which is located in a 120 year old building, has been using the Grander System for purifying ALL of the water used in the 3 story building. Including the water used to brew our Organic Beers and make our Organic Food.

Initially, our Hot Liquor Tank, used in the Brewery, had a ¼" of calcium scale built up inside of it that we were unable to remove without permanently damaging the tank. After three (3) months of using the Grander Water Technology, that calcium build-up simply flaked away. And we have never had a problem with calcium build up again. The same is true for ALL of the faucets installed in the building, some of which may be as much as 30 years old. They simply do not have those weird calcium build-ups that old faucets get.

For many years, our customers have commented about the taste of our water. City water tends to have that rusty iron and chlorine taste. Everyone agrees that "Our water tastes better" or that "Our water is wetter". Many people come in just to fill their water bottles with our water!

Thank you Grander® Water Revitalizing System for making our water better!

Thankyou
Toby Rodriques
